

YOU'LL TAKE ANY ADVANTAGE you can to improve your business operations. Why not consider Squirrel Mobility? Squirrel Mobility is a suite of mobile point of sale solutions designed to provide flexibility and increase efficiency. By using tablet and handheld devices with a Squirrel POS system, you can enhance customer service and ultimately your bottom line.

FOR THE APPLE iPad AND MORE

- Want more than just an order taking device when you're on the go?

Squirrel Professional is a full-service point of sale solution that now runs seamlessly on the Apple iPad, iPhone, and iPod touch. Not only are you able to take orders, but you can also edit menus on the fly, manage promotions, and even send communications to your staff using our handy messaging system – all on your Apple device! As another option, Squirrel Professional also runs on Android tablets, WebDT tablets, and our own Squirrel Handheld.

MIX AND MATCH HARDWARE

- Have different needs for different departments?

With Squirrel Professional, you have the flexibility to mix and match fixed terminals and mobile devices since what works in one area of your business may not be suitable in another. With the exception of the Squirrel Handheld, no extra training is required because the Squirrel Professional software looks and operates the same regardless of the hardware you're using.

MOBILE POS WHERE YOU NEED IT

- Looking for a line busting solution?

Using Squirrel Professional on a mobile device, servers can enter and send orders from the table, increasing accuracy and speeding service. However, a Squirrel Mobility device can also improve workflow by acting as a secondary terminal wherever it's needed most in your restaurant or bar. If you have a particularly busy section and your servers are queuing to enter orders, move an iPad running Squirrel Professional beside your fixed workstation to bust the line and turn tables faster. Your bottom line will thank you!
